Green Planning as a Strategy to Mitigate Climate Change and Promote Ecotourism

This study looks at the development of research and problems of availing information for decision making in the process of planning and management of green cities and promotion of ecotourism. It also looks at the impact of climate change which could be catastrophic if appropriate mitigation measures are not put in place. The broad objective of the reseach is to study how green planning can be used to mitigate climate change and promote ecotourism.
